

## A NEW APPROACH TO **ACCESS CONTROL**

### ACC-20L INTELLIGENT LIFT CONTROLLER

The Infinity ACC-20L is an intelligent lift controller which seamlessly communicates with the ACC-100 and ACC-200 controllers and provides lift control of a lift car for up to 20 floors. Two ACC-20L units can be connected together to control up to 40 floors per lift car. Featuring the same TCP/IP based infrastructure as the ACC-100/ACC-200 the lift controller is a network device managed via the ACS-PC software and allows for granular lift destination control via cards and users of an ACC-100/ACC-200 access control system.

Lifts are treated as additional doors and all lift manufacturers can be integrated! This allows the Infinity ACC system to meet any client requirements for operation.

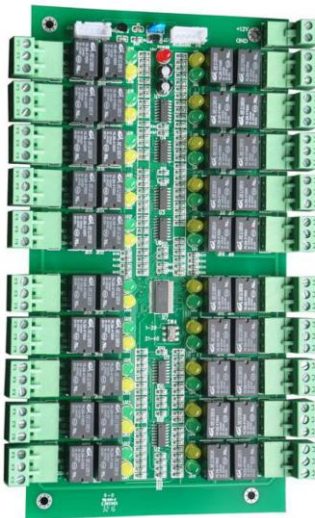

TCP-IP Network Based  
40 floors control per lift  
ACC-100/200 compatible

## FEATURES and BENEFITS

- Third Party Card Reader Support
- Wiegand 26~40bit support
- TCP/IP support
- PSU included
- 7Ah battery mount support
- Dedicated Fire Alarm Input
- 100Mbps Ethernet port
- 1 Reader input
- on-board event storage
- System Anti-passback support

## TRULY THE WAY FORWARD IN ACCESS CONTROL

### TECHNICAL DATA

- 90-230V AC
- Operating Temp: -10°C to 50°C
- Space to mount a 7Ah battery within the PSU enclosure
