

A NEW APPROACH TO **ACCESS CONTROL**

ACC-24Lw INTELLIGENT LIFT CONTROLLER

The Infinity ACC-24Lw is an intelligent web-browser powered lift controller which seamlessly communicates with the ACC-100w and ACC-200w web-based controllers and provides lift control of a lift car for up to 24 floors. Multiple ACC-24Lw units can be connected together to control over 120 floors per lift car. Featuring the same TCP/IP based infrastructure as the ACC-100w/ACC-200w the lift controller is a network device managed via the web browser based technology and allows for granular lift destination control via cards and users of an ACC-100w/ACC-200w access control system.

Lifts are treated as additional doors and all lift manufacturers can be integrated! This allows the Infinity ACCw system to meet any client requirements for operation.

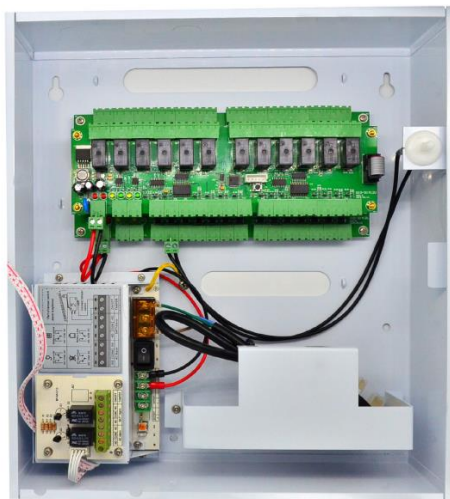

Browser-Based Network
>120 floors control per lift
ACC-100w/200w compatible

FEATURES and BENEFITS

- Third Party Card Reader Support
- Wiegand 26~40bit support
- TCP/IP support
- PSU included
- 7Ah battery mount support
- Dedicated Fire Alarm Input
- 100Mbps Ethernet port
- 1 Reader input
- on-board event storage
- System Anti-passback support
- Browser Based

TRULY THE WAY FORWARD IN ACCESS CONTROL

TECHNICAL DATA

- 90-230V AC
- Operating Temp: -10°C to 50°C
- Space to mount a 7Ah battery within the PSU enclosure
