### INFINITY SERVER MAINTENANCE

# Server Maintenance

To ensure reliable operation it is highly recommended to implement a maintenance schedule. The basic parameters that should be observed are as follows:

## Cleaning

1. Power down machine
2. Disconnect all cables
3. Remove screws as shown below
4. Remove lid as shown below
5. Remove power supply modules as shown below
6. Use compressed air to blow out the dust paying

Remember to drain any water build-up from your tank

If using spray canister do not invert the can when spraying

## WINDOWS UPDATES

By default the Windows updates are set to automatically download and install. Please note that installing Windows updates requires a system restart which will make the system offline for a few minutes. You can have your own schedule, as below.

## Driver Updates

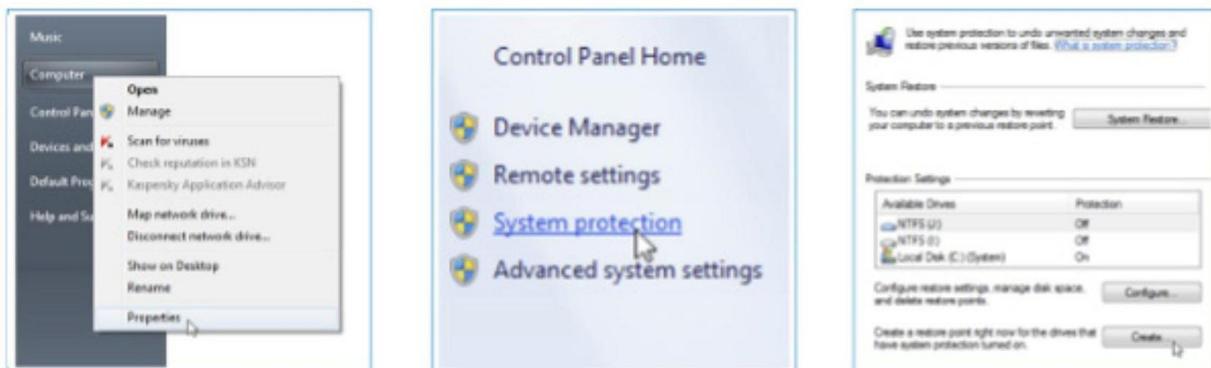

Should you wish to get the latest approved driver packs for your machine please contact [support@infinity-electronics.com](mailto:support@infinity-electronics.com)

## Application Updates

Please contact the software vendor directly for instructions on how to update your applications. However, you can always contact the friendly Infinity support team who can point you in the right direction.

### Create Windows Restore Point

- Right click on Computer Icon on desktop or Start menu
- Select Properties
- Select System Protection
- Select Create to create a new restore point

## Saving configuration files from your application

Check with the software vendor on how to save configuration files for your application.

## View Event Logs

Below is how to access the event logs which may prove useful in diagnosing problems.

- Go to Control Panel
- Click System and Security
- View event logs
